CS ENGINEER | DATA ANALYST

PROFESSIONAL SUMMARY

Analytical and detail-oriented professional with experience in data reporting, business intelligence, application support, and data operations. Skilled in SQL, Advanced Excel, Power BI, Amazon QuickSight, Amazon Redshift, MySQL, and Python. Experienced in data extraction, cleaning, validation, transformation, dashboard development, KPI reporting, and reporting automation. Proven ability to analyze business and operational datasets, identify trends, generate actionable insights, and support data-driven decision-making through dashboards and business intelligence solutions.

TECHNICAL SKILLS

Data Analytics & Reporting: Sales Analytics, Revenue Analysis, Customer Analytics, Customer Segmentation

Data Visualization, Dashboard Development, Reporting Automation

Programming & Query Languages: SQL, Python

Business Intelligence & Visualization: Power BI, Power BI Service, Power Query, Power Pivot, Advanced Excel.

Data Management: Data Cleaning, Data Transformation, Data Validation, Data Reconciliation, ETL Processes, Exploratory

Data Analysis (EDA).

INTERNSHIP

Web Developer Intern | CodeBind Technologies, Chennai | 2024

- Developed and tested 5+ responsive web applications using HTML, CSS, and JavaScript, directly improving user experience and interface consistency.
- Implemented front-end and back-end functionalities for real-world client projects, contributing to on-time product delivery within sprint timelines.
- Collaborated with a cross-functional development team to optimize application performance, reducing average page load time by approximately 20%.
- Resolved 30+ debugging issues through systematic logical analysis, strengthening overall code quality and application reliability.

Gained hands-on exposure to data flow, application logic, and structured problem-solving — skills directly transferable to data analysis workflows.

PROJECTS

Smart Attendance System with Eye-Blink Authentication

SMART ATTENDANCE SYSTEM WITH EYE—BLINK AUTHENTICATION

Tech Stack: Python | OpenCV | Face Recognition | Computer Vision | Data Analysis

- Engineered a biometric attendance system integrating face recognition and liveness detection, reducing proxy attendance incidents to near zero.
- Designed and optimized real-time image processing pipelines using OpenCV, achieving reliable classification of live versus static face inputs.
- Iteratively analyzed detection errors and applied data-driven algorithm adjustments, improving overall system accuracy and robustness.

HYBRID SPATIAL—FREQUENCY FRAMEWORK FOR FORENSIC IMAGE TAMPERING DETECTION

Tech Stack: Python | Image Processing | Feature Extraction | Statistical Analysis | Data Analytics

- Developed a forensic detection framework combining spatial and frequency-domain analysis to identify image manipulation with high precision.
- Applied feature extraction and statistical analysis to classify manipulated versus authentic images across a diverse benchmark dataset.
- Structured the research process to validate model performance quantitatively, gaining experience in data interpretation and evidence-based analysis.

EDUCATION

Computer Science and Engineering (CSE)

St.Xavier Catholic College of Engineering

CERTIFICATIONS

- SQL for Data Analytics
- Python for Data Analysis
- HTML, CSS certification.
- Advanced Excel for Business Analytics

ADDITIONAL INFORMATION

Location: Bangalore, Karnataka, India
